EcoShell I Airforms

EcoShell Airforms are made out of much tougher material than Monolithic Dome Airforms. They need to be re-usable so they need to last longer.

There are many differences between an EcoShell and a Monolithic Dome, but the main difference is that an EcoShell is constructed without the use of Polyurethane foam. These make good garages, storage sheds, and housing in equatorial climates.

This price is for the AIRFORM ONLY. If you require plans please email us at mail@monolithic.com.
